PROFESSIONAL SUMMARY

I am currently pursuing a degree in Data Science with a focus on building strong fundamentals in programming, data structures, and system design. Alongside academics, I am actively working on projects in Generative AI, web development, and cloud computing to gain practical exposure and problem-solving experience.

My skill set aligns well with this role as I can understand requirements, design structured solutions, and implement them using modern technologies. I am particularly interested in developing intelligent applications and scalable backend systems that deliver real value to users.

I am looking for an opportunity where I can contribute to real-world projects, learn from experienced teams, and improve my technical and communication skills. Over time, I aim to grow into a reliable engineer who can take ownership of projects and contribute to the organization's long-term success.
